## Summary

I am a consultant who has found a true passion working with the latest technologies. In my work as a consultant I've worked with vendors and clients to deliver creative solutions to their specific problems. I use logic and problem solving to create solutions that allow internal and external enterprise size systems to communicate with each other. In addition, I am taking the first offering of Udacity's iOS Nano degree. I am learning best practices, how to craft high quality code and create apps to list on the App Store.

---

## Experience

### **Integration Consultant at DayNine Consulting, Inc.**

April 2014 - Present (1 year 2 months)

Interfacing with clients and vendors to access their needs and deliver a solution that will meet them.

Designing and creating Workday integrations that interface with internal and external systems.

### **Software Engineer at Liberty Security Services**

June 2013 - Present (2 years)

Design and implement CMS application using Django and Python. Integrate web based applications with SQL backend.

### **Software Quality Assurance at Symbotic**

July 2012 - April 2014 (1 year 10 months)

Integrate automation software within a supply chain environment. Create, execute, and maintain automated and manual test cases on individual and interconnected software components. Participate in software design process. Work with contractors on software design and testing. Create manuals for integrating software components.

### **Automated System Operator at C&S Wholesale Grocers**

June 2011 - July 2012 (1 year 2 months)

Managed automated warehouse system using Linux and Windows based proprietary software. Used SQL to create reports and respond to real time issues. Used Bash and Perl scripts to create system summary outputs that could be run by warehouse personnel for reporting and trouble shooting. Managed integration of supply chain software and hardware. Managed 6 warehouse staffers.

### **Business Manager at B and T Landscaping of Ulster County**

September 2007 - May 2011 (3 years 9 months)

Created database to track customer information, account activity, and expenses. Used ETFs to hedge fuel costs. Created billing forms using Excel. Created algorithms for creating estimates for jobs.
